

MADE TO ORDER · ARTWORK TEMPLATES

Print file guide, *by product and size.*

Everything you need to set up artwork for every product in our catalog: the print file size for each size and ratio, how each piece is built, and the template to design on.

Three steps to a *print-ready file*.

1

Find your product

Products follow our catalog: Paper and Canvas, then the finish. The next page shows where each one sits in this guide.

2

Find your size by ratio

Each product page groups sizes by ratio: two by three, three by four, square, panoramic and long panoramic. Read across to the print file size and pixels.

3

Design on the template

Open the template for your size and orientation, place your artwork so it fills the whole file, then delete the guide layer before saving.

File requirements

- JPG, PNG or TIFF, at 150 dpi or more at the print file size. 300 dpi is welcome.
- RGB color with the sRGB profile.
- Match the ratio of the size you order. Horizontal is the same size turned.
- Fill the whole file, edge to edge. Keep text and faces inside the safe area.
- Files print as supplied. No proof is issued.

Reading a template

- | | |
|---|---|
|  Your image, edge to edge |  Safe area for text and faces |
|  Hidden under the frame lip or mat |  Standoff, sits over the image |

Every size is the finished outside dimension as the piece hangs. Measurements are in inches.

Find your product

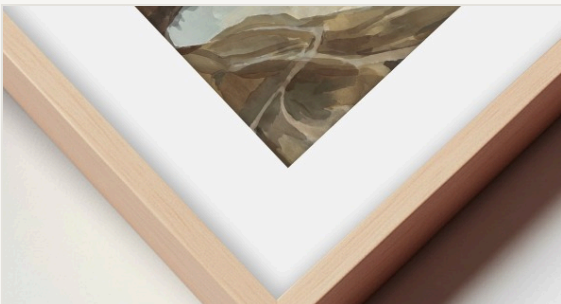

Each product has its own page with every size, grouped by ratio.

Hand this page off, *and files come back ready.*

File setup rules

- 1. Sizes are the finished outside size in inches, as the piece hangs. Sizes are listed vertical; for horizontal, swap width and height.
- 2. Minimum pixels = print file inches x 150. For 300 dpi, double both numbers.
- 3. JPG, PNG or TIFF. RGB color with the sRGB profile.
- 4. Fill the whole print file, edge to edge. No added borders or drawn frames.
- 5. Keep text, faces and logos at least 1/4 in inside the visible edge.
- 6. Match the ratio of the size ordered. A file in another ratio is cropped to fill from the center.
- 7. Delete the template guide layer before saving.
- 8. Share files as a Dropbox or Google Drive link set to Anyone with the link.

Worked example. Paper, Framed, 16 × 24 vertical: print file 14 3/4 × 22 3/4 in, minimum 2,213 × 3,413 px.

Rules by product

PRODUCT	PRINT FILE	HIDDEN OR COVERED	WE ADD
Paper, Rolled	Finished size	Nothing	1/4 in white border, every side
Paper, Framed & Matted	Image seen + 1/2 in, see page 5	1/4 in under the mat, every side	White mat: same at top and sides, extra at the bottom; horizontal pieces carry the extra at the sides
Paper, Framed	Finished size – 1 1/4 in	1/4 in under the frame lip, every side	Frame and glazing
Paper, Metal	Finished size	Standoff version: 3/4 in caps at the corners, centered 1 in from each edge	Standoffs or rear frame
Canvas, Rolled	Finished size	Nothing	2 in blank border, every side
Canvas, Wrapped	Finished size, front only	Nothing	Sides, mirrored or a solid color
Canvas, Framed, Standard	Finished size – 1 1/2 in	Nothing	Mirrored edge and floater frame
Canvas, Framed, Premium	Finished size – 1 1/4 in	Nothing	Mirrored edge and floater frame
Canvas, Acrylic	Finished size	Standoff version: 3/4 in caps at the corners, centered 1 in from each edge	Standoffs or rear frame

Template files are named by product, size and orientation, for example **R2H_Framed-and-Matted_16×24_vertical_v3.png**.

A quick check, *and common fixes*.

Checklist

- ☐ The file matches the print file size for the product, size and orientation ordered.
- ☐ Pixels meet the minimum for that size.
- ☐ The image runs edge to edge, with no white or colored border.
- ☐ Text, faces and logos sit inside the safe area.
- ☐ The guide layer is deleted.
- ☐ RGB with the sRGB profile, saved as JPG, PNG or TIFF.
- ☐ The share link opens for anyone with the link.

Common fixes

Low resolution

Start from the largest original you have. Enlarging a small file does not add detail.

Wrong proportion

Crop to the ratio of the size you order, so you choose the crop rather than leaving it to the center.

Text near the edge

Move it inside the dashed safe line. Frame lips, mats and hand stretching all sit near the edge.

Colors look different

Convert CMYK files to RGB with the sRGB profile. Screens vary, so expect small shifts.

A border in the artwork

Remove it. Mats and borders are added in production where the product calls for them.

QUESTIONS ON FILES OR SIZES

We're here to help
get it right the first time.

Email info@ready2hangart.com with your product, size and file, and our team will take a look.
